

## Subject: Professional DevOps IT Engineer

- Under the Technical Manager, the figure we are looking for will be called to manage the development and integration of our Cloud infrastructure in order to improve the end customer experience.
- In coordination with the Technical Manager, he will personally and independently follow the solutions projects, raising the quality and standardization levels of the infrastructure on the basis of the performance and cost-saving objectives agreed with the management. The role includes constant contact with the internal functions involved in the development of products / services and / or project management.

The ideal candidate is in possession of the following requirements:

- Bachelor's / Master's degree IT or IS (equivalent experience in the same role can possibly replace the degree);
- Familiarity with container orchestration services, especially Kubernetes, OpenShift
- Familiarity with agile software development in Go, C / C ++, Java, JavaScript
- Experience in administering and deploying CI / CD development tools such as Git, Jira, GitLab, Ansible or Jenkins
- Significant experience with Windows and Linux operating system environments;
- Experience with infrastructure scripting solutions such as PowerShell or Python;
- Operational knowledge of PostgreSQL and Mongo database
- Operational knowledge of InfluxDB and TICK Stack;
- Knowledge of English (intermediate level);
- Willingness to make short trips;
- Predisposition to interpersonal relationships;
- Adequate communication skills;
- Predisposition to work in a team;
- Passion, curiosity, open and flexible mindset;
- A keen interest in personal growth
- Residence preferably located within a radius of 30 km from the workplace.
